

SHOWGARDEN

Dahlia - 2020

11/09/2020

DAHLIA

General information

During Summer our show garden is the place to judge, photograph and admire our Dahlia assortment. The plants are tested on their performance in the Dutch climate and under our own conditions. By keeping track on the various crops and various, year by year, we get a reliable image of each variety. Dahlia are more sensitive for mildew, but this is not visible in the same way every year. The constant gathering of all data will lead to a reliable judgement.

The plants are replanted from a small pot or as plugs into a 20 litre pot around week 16. In each pot 4 or 5 plants are planted. Around week 20, the plants are put outdoors after some hardening off in a cold greenhouse. The pots are placed on concrete stands, situated on a clean concrete flooring. The field is placed in such a way, that the plants are in full sun all day except for a small part with some morning shadow.

The special outdoor-potting soil is enriched with 3 kilos/m³ Osmocote slow release fertilizer for 5 to 6 months. Apart from that all pots are watered and fertilized by means of a drip system. Each watering is done with an EC of 2-2.5 on a vegetative schedule. The frequency of watering depends on the irradiation. We apply no crop protection chemicals except for 1 or 2 preventive mildew treatments before the middle of June.

During Summer, dead flowers are removed regularly.

Climate

	May	June	July	August	Total
Rainfall average	60	65	81	72	278
